Due to a new modular design, the ATD80133, ATD80136 & ATD80139 have new replacement part numbers. When getting parts orders from your customers, to ensure that you are getting them the right part, please ask them to check to see if the light they are working on is the first generation or the second generation version of this light.

The first generation says “Saber Li-Ion” on the handle, and there is no screw through the handle.

The second generation says “Saber” on the handle and there is a screw through the handle near the bottom side of the logos oval.

This will make a difference in which parts you order.
